## Otchil (Korea Lacquer) & Mother-of-pearl

### Title

### Frame made of Korea Lacquer and Mother-of-pearl for elevator (1/2)

'Otchil' is a Korean traditional lacquer, which provides excellent surface protection for metal painting. The Korean lacquer (Otchil) is an eco-friendly coating material obtained from nature, has a 99.9% anti-bacterial effect (Please refer to the attached Appendix for Test Report).

'Mother-of-pearl' is Korean traditional material that has been adapted on luxury furniture and accessories for long time. We incorporated two Korean traditional materials, Korean lacquer (Otchil) and Mother-of-pearl to express natural feeling and make innovative cabin design. We painted Korean lacquer directly on the aluminum panel and decorated the design by attaching Mother-of-pearl. There is a total of four framed art works and one of them is applied according to the customer's choice.

The frame design consisted of a design suitable for commercial/residential elevators and gave meaning to each design. <Hyang>, which embodies the rich mountains and round moons, means communication and harmony, while <Goong> expresses the original patterns used in palaces to capture the continued prosperity of wealth. <Song> is a work that hopes for unwavering health and wealth, and <Seung> represents the rise of fame and fortune. The work was produced using three different kinds of mother-of-pearl so that each design can be implemented in a different way while being unified look. Rear gold foil is also applied to the design to enhance the quality and beauty.

It is designed to be applicable to all models. This is possible by maintaining the same sized frame and utilizing a dual frame structure regardless of car size.

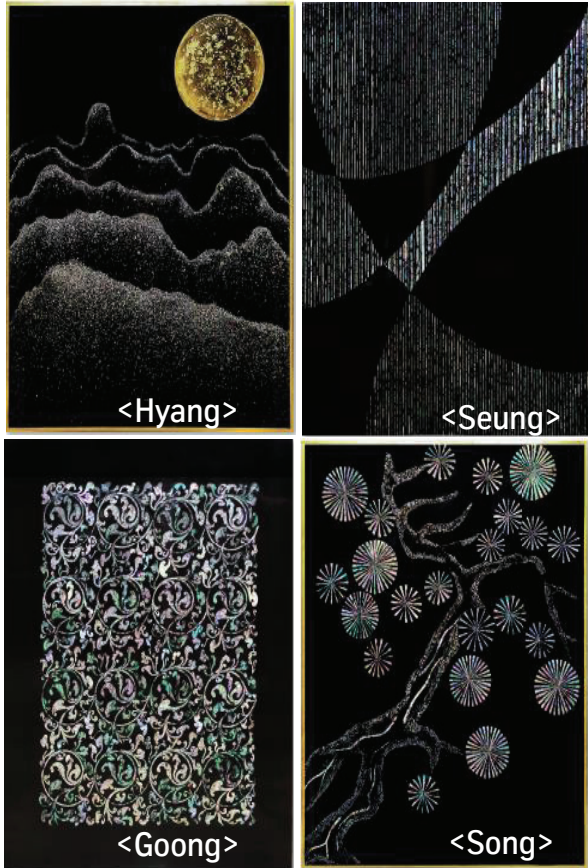

The glittering reflection of Mother-of-pearl and Korean lacquer makes the elevator like an art gallery. The elevator is not a dry cube any more but becomes an emotional space through traditional value and beauty.
